compute: first-update planes differ between conditions; q0 half-width 1, q1 half-width 125 global L2; BF16 evaluations
q0 follows each raw saved first update; q1 orthogonalizes common random row 0. Unequal axis scales prevent visual slope comparisons. Shared z/colors.
Thin c1=0 lines reuse sampled update-one interpolation/extrapolation; only t=0/1 are saved optimizer states. Missing data remain blank.
